

European Statistical Meeting

Decision-making in drug development

12 December 2018
at Servier, Suresnes, near Paris, France

Taking decisions during the development of a new drug requires combining many and varying pieces of information. The interconnections between them are often only partially known, reflecting the complexity of the context in which drugs are evaluated and the cognitive load required for health care decisions. Decision-makers need quantitative tools to support informed decisions, with transparent processes that synthesize the whole available information in order to evaluate the success associated to different options.

This meeting aims to bring together statisticians from the pharmaceutical industry and academia to hear about recent advances in statistical methods for quantitative decision-making in drug development.

Confirmed speakers include:

Anthony O'Hagan University of Sheffield	Introduction to decision-making
Juan Abellan GSK	Prior elicitation to support quantitative decision-making
Paul Frewer Astra Zeneca	Decision Making in Early Clinical Development: The framework used within AstraZeneca
Maria Costa Novartis	Benefit-Risk Assessment in Drug Development
Nigel Stallard University of Warwick	Decision-making in phase II/III trials using early endpoint data
Tom Parke Berry consultants	Using simulations to optimize drug development decision-making

Poster session Call for abstracts!!!

If you wish to present a poster, please send an abstract to Gaëlle Saint-Hilary (gsainthilary@gmail.com) by October 31st 2018. The notification of acceptance will be provided by November 9th 2018.

Venue
Servier
50 Rue Carnot,
F- 92284 Suresnes
France

Registration

Fee includes lunch & refreshments

On or before 15th November 2018

Industry rate:	€170.00
Academic rate:	€110.00

After 15th November 2018

Industry rate:	€200.00
Academic rate:	€130.00

A limited number of places is available free of charge for students, please contact Emmanuel.quinaux@iddi.com
