

Roche Biostatistics – Make your mark, improve lives

Associate/Statistical Scientist/Senior/Principal – Statistical Scientist positions in Oncology, Welwyn Garden City, UK

The opportunity

Due to the continued growth of our pipeline we have opportunities for exceptional statisticians at both junior and experienced levels to join our Oncology Biostatistics group.

As an Oncology Biostatistician at Roche you will be a key strategic partner in multi-disciplinary teams, working with colleagues based both locally and globally developing oncology drugs in Phase 1 to 3 trials.

In this role you will be responsible for providing drug development and statistical expertise to the design and analysis of clinical studies and, depending on your experience, for the senior/principal roles the responsibility may extend to the entire global development program. You may also be responsible for providing statistical input to teams preparing for health authority submissions, leadership of other statisticians, statistical programmers and related colleagues in health authority activities and participating in health authority interactions.

This is an opportunity to own your career development and be actively encouraged and supported through continual learning opportunities (including courses, local & global statistical and other scientific seminars, potential part-time study and rotations into related departments, two conferences per year, membership of industry/academic working groups such as through PSI).

You will be encouraged to pursue applied research on drug development opportunities and challenges as a continued part of your role, either alongside your project work or even as a formal rotation into our statistical methodology group. You will be given you the freedom to discuss ideas and collaborate with over 200 (internal) Biostatisticians and other Data Scientists on oncology drug development opportunities/challenges, as well as with key academics with whom we have consultancy arrangements.

Who you are

You're someone who wants to influence your own development. You're looking for a company where you have the opportunity to pursue your interests across functions and geographies. Where a job title is not considered the final definition of who you are, but the starting point.

You have qualifications that have given you the strong basis for your career so far (e.g. MSc or PhD in Statistics or related discipline) coupled with a programming language (e.g. SAS, R) that allows you to evaluate assumptions when designing clinical trials and then model/ explore data arising from clinical trials.

It is desirable (but not essential) that you have experience of study design and data analysis from different phases of drug development or in-depth of pivotal studies for health authority submissions. You may also have experience in specialist areas such as analysis of biomarker data. For previous vacancies we've had success appointing statisticians from a range of backgrounds (e.g. academic settings, clinical research groups, CROs) so your own experience could have been gained outside of the traditional pharmaceutical industry.

Depending on your previous experience, you may have a good understanding of regulatory guidelines in drug development and have experience of participating or leading a team or sub-team working on a Filing to a HA or HTA. For senior/principal roles it is also desirable that you have demonstrated leadership potential by leading such a team or sub-team.

To be successful in each of these roles you will need to provide evidence of conducting statistical research through your qualifications or current position.

We would also be interested to hear from those who have performed novel statistical work (perhaps unpublished) that has provided innovative approaches for your drug project team to consider. You want to

take on a role in a company that will provide you with opportunities and support, but then leave you to get on and make the most of those opportunities globally.

If you have some, but not all, of the above experience but believe that the global expertise of the Roche/Genentech people and the depth of the oncology portfolio could be a place at which you could excel, then we'd very much like to hear what you have to offer.

Roche is currently supporting statisticians to pursue a PhD on a part-time basis, so would be interested to talk with you if you are doing likewise or considering this.

Who we are

Our award-winning office, known as Hexagon Place, was opened in 2005 and provides a modern, flexible working environment with facilities that are second-to-none. Around 1,400 people work at our Welwyn office in Early Development (pRED), Product Development (PD), Commercial (Rx) and of course our corporate function.

There is a fully equipped gym on-site, a library and information centre, and an active sports and social club. We also have a subsidised staff restaurant providing foods to cater for every taste throughout the day. At the heart of the building is an informal meeting area known as The Street which features a coffee shop, snack machine and cashpoint. A second building on-site, called The Hub, contains modern meeting room and conference facilities.

If you are proud of contributing and feel you have the commitment to teamwork and innovation that we are seeking, then Roche is the organisation for you. In return we offer a competitive salary plus the excellent benefits you would expect from a blue-chip organisation, including a genuine interest in your development and progression. When completing your application, please ensure you attach an up to date CV and details of your current remuneration package.
