

PSI One Day Meeting: Career Young Statisticians

QuintilesIMS, Reading, UK

Monday 19th June 2017, 09:30 - 16:30

The aim of this meeting is to provide a relaxed environment for career young statisticians where they can present and discuss various statistical topics and interact/network with other statisticians in similar positions to themselves. The PSI conference and similar events can be daunting for some attendees both in terms of who is in the audience and also in being happy that what they present is deemed new and original. For this one day meeting the audience will be peers with similar levels of experience and will include content of interest to career young statisticians. In addition to presentations from fellow statisticians there will be a soft skills workshop on explaining statistics to non-statisticians and ample opportunity to connect with colleagues across the industry.

Exploring recent developments in the MAMS methodology for designing an adaptive trial

Julia Abery — University of Reading

AdePro – A new Perspective on Safety Profiles

Nicole Mentenich, Christoph Tasto and Bastian Becker – Bayer

Seamless Study Designs & Real-time Data Capture Using Electronic Devices
