Who are PSI and what do we do?

- We are a community dedicated to leading and promoting the use of statistics within the healthcare industry for the benefit of patients. We are non-profit organisation run by and for members delivering relevant, up to date support and resources including scientific meetings, online training, networking events, training courses, career development

By the end of the webinar, you should:

- Have a better idea of careers using mathematics in the pharmaceutical industry
- Understand the routes into careers in the pharmaceutical industry

This is me: Emma Crawford

**Undergraduate degree BSc
Mathematics with placement
year**

"We are a community dedicated to leading and promoting the use of statistics within the healthcare industry for the benefit of patients."

**Postgraduate degree
MSc Medical Statistics**

**10+ years working as a statistician in
pharmaceutical industry**

What about you?

Are you a: student, teacher or parent?

If a student what year of study:
Year 9, Year 10-11, Year 12-13

Do you like maths? Yes/ No

What do we do?

"We are a community dedicated to leading and promoting the use of statistics within the healthcare industry for the benefit of patients."

What job does Maths lead to?

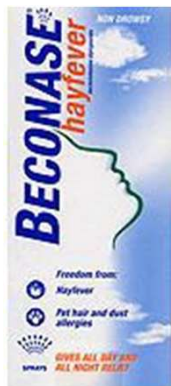

"We are a community dedicated to leading and promoting the use of statistics within the healthcare industry for the benefit of patients."

What do we do with maths?

....We use maths to find
new medicines and help
improve the lives of patients

Do any of these look familiar?

How is Maths used in Medicine?

When we find potential new medicines we want to see if they work

We run a clinical trial to collect data

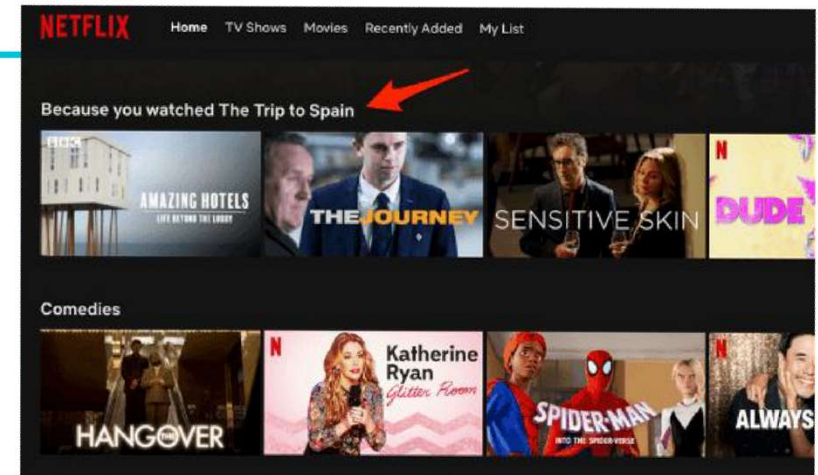

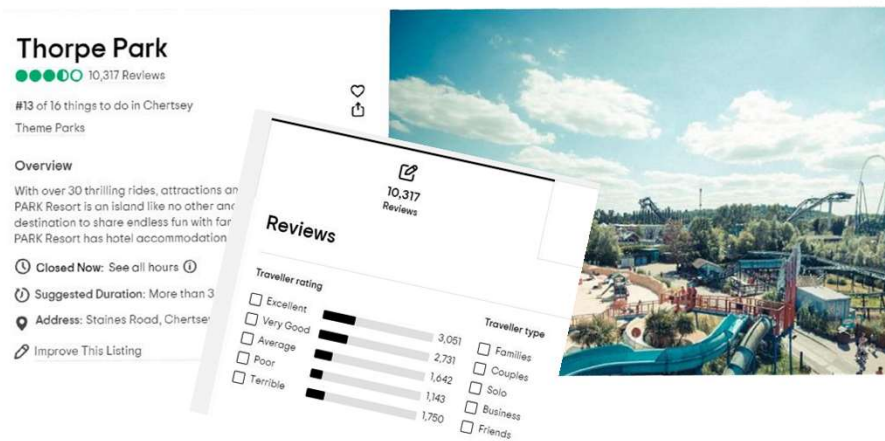

We use statistics to analyse the data to assess if the medicine works

What is Statistics?

- **Statistics** is a type of maths
- Really, it's the **study of data**
 - How do we collect data?
 - How do we summarise and analyse data?
 - How do we present data?

Statistics is all around us!

Daily cases continue to fall

Daily confirmed coronavirus cases by date reported

Coronavirus in the UK

R number range

0.7-0.9

Source: UK Government Office for Science

BBC

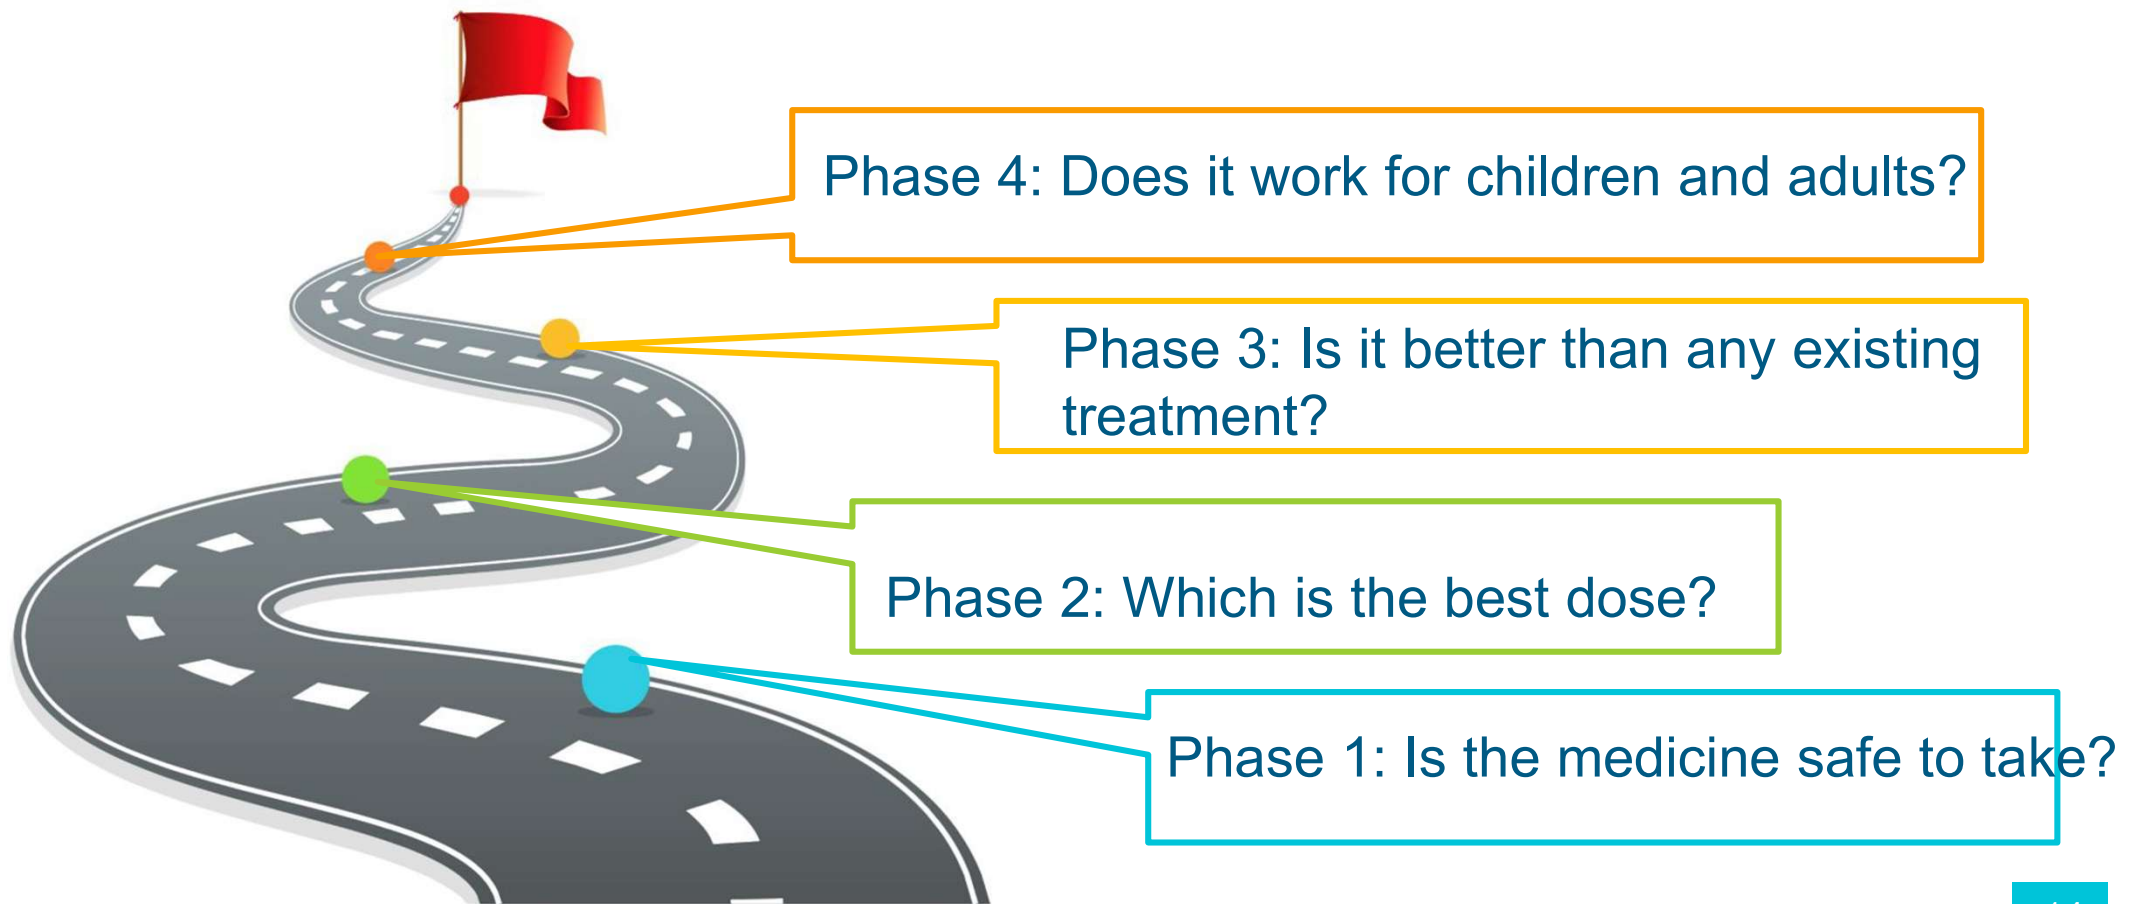

Developing a New medicine

- Developing a new medicine has many steps – it is a long process!
- Clinical trials study the **effectiveness** and **safety** of medications or medical devices in groups of people.

Questions we can answer with Statistics...

"We are a community dedicated to leading and promoting the use of statistics within the healthcare industry for the benefit of patients."

Is This Your Future Career?

"We are a community dedicated to leading and promoting the use of statistics within the healthcare industry for the benefit of patients."

What about you?

Do you have a future career in mind? Yes/ No/ Not Sure

How does this sound?

Improving patients lives Global impact Advancing medicine

Key role

Career
progression

Always learning

Flexible working

Generous pay &
benefits

Work variety

Collaboration

Teamwork

"We are a community dedicated to leading and promoting the use of statistics within the healthcare industry for the benefit of patients."

A Working Week in the Life of a Medical Statistician

MON

- Meet with **cross-functional** team to discuss proposed design for new trial.
- Offer statistical expertise on proposed **endpoints** (what we are going to measure) and **sample size** (required number of participants).

TUE

- Document the statistical approach for an existing trial by writing the **Statistical Analysis Plan**.
- Perform **detailed data review** for ongoing trial, ensuring data integrity and completeness

WED

- Collaborate with programming team to review the **derivations of analysis datasets**
- **Draft responses to regulatory questions**, particularly about study design or statistical methodology.

THU

- Perform **statistical analyses** of clinical endpoints using statistical software
- Attend a **study team meeting** to discuss progress of an ongoing trial, including patient recruitment, timelines for key deliverables, etc.

FRI

- Attend a **training session** on new methodology, software tool, or regulatory guidelines
- Collaborate with Medical Writer to **author an abstract** for an upcoming scientific conference.

"We are a community dedicated to leading and promoting the use of statistics within the healthcare industry for the benefit of patients."

How to get a job in the industry

What about you?

Do you know what you want to study next? Yes/ No/ Not sure

Next Steps

Anetta: a keen mathematician

A levels:
Maths, Further
Maths, Economics,
and Physics

BSc Maths and
Statistics (with
placement year in
industry)

MSc Medical
Statistics

Statistician job
offer in
pharmaceutical
industry

Anetta took a very traditional route into medical statistics in the pharmaceutical industry. Anetta has always loved maths. She chose A levels which have a large maths content and went on to study a maths and statistics degree. After a placement year in the pharmaceutical industry she was inspired to take an MSc in Medical Statistics and was successful in securing a job as a medical statistician.

Benjamin: a talented programmer

A levels:
Maths, Computer
science, History

BSc Computer
science

Programmer
job offer in the
pharmaceutical
industry

Benjamin likes maths and computing, which is reflected in his A level choices. During his Computer science degree, he found he especially enjoyed projects involving programming. After graduation he was able to secure a job as a statistical programmer in the pharmaceutical industry.

Caroline : A Scientist interested in healthcare

A levels:
Maths, Biology,
Geography
and English

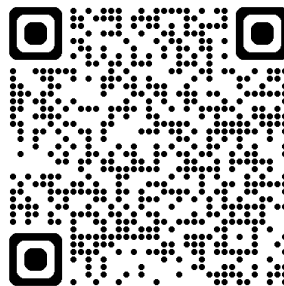

BSc Biology

MSc Medical
Statistics

Statistician job
offer in
pharmaceutical
industry

Caroline had a broad set of interests at A level, choosing both scientific and arts subjects. She studied biology at university and found she had a strong interest in human biology and medicine. She also enjoyed using statistical tests in her practical experiments. She decided to study for an MSc in Medical Statistics and now enjoys working as a medical statistician in the pharmaceutical industry, using her skills and experience of both statistics and biology.

Meet the professionals

"We are a community dedicated to leading and promoting the use of statistics within the healthcare industry for the benefit of patients."

Sarah Crossley – Apprentice Statistician

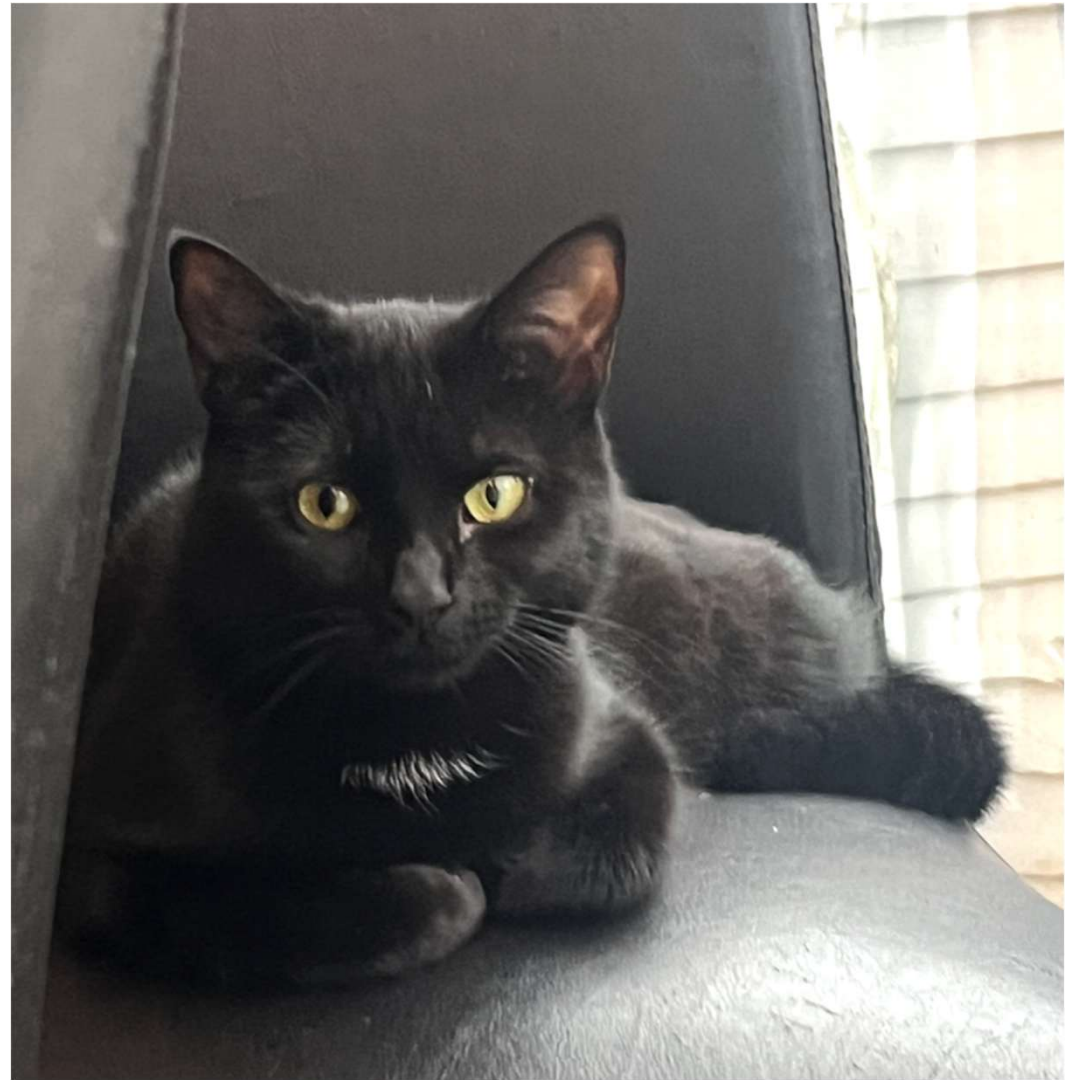

Who am I?

My name is Sarah

Second year Medical Statistician Apprentice

In my spare time I love getting involved in my local improv communities!

My housemates and I have recently fostered a cat called Minerva who is very cute but shy, so incase she doesn't appear on the call here she is

A Level choices

- I had no idea what I wanted to do or study
- I was very worried about making the "right" A Level choices
- Chose a combination of what I was good at, what I enjoyed and what I thought I should study

University Years

- Studied Mathematics with a year in industry at the University of Birmingham
- The year in industry is the best thing I have ever done
- I spent my year working in a Pharmaceutical company and getting paid for it!

The apprenticeship and Beyond

- What is the apprenticeship?
- I started my apprenticeship in January 2024
- Monday – Thursday is a standard work week for a graduate entry statistician
- Friday is my apprenticeship day
- On graduation I will have 3 years experience working!

Alistair Haston

IQVIA

About me

Darlington

Reading

Education

A-LEVELS

Maths
Physics
Biology
(AS Level: PE)

Programming: None

**Northumbria
University**
NEWCASTLE

**University of
Sheffield**

BSc Mathematics

Programming: MATLAB, R

MSc Statistics

Programming: R

Biostatistician at IQVIA

- Biostatistician at IQVIA: Nov2020 – Present
- Programming: SAS

What does my job involve?

- Writing specifications and programming
 - Datasets
 - Tables, Listings, Figures
- Writing Statistical Analysis Plan
- Managing the biostatistics project team
- Communicating with other IQVIA departments and the customer (pharmaceutical company)

Tabitha Lennox – Statistical Programmer

Statistical Programmer at GSK

Education

**A-
levels:**

Maths

Further maths

Computer
Science

Physics
(AS Level)

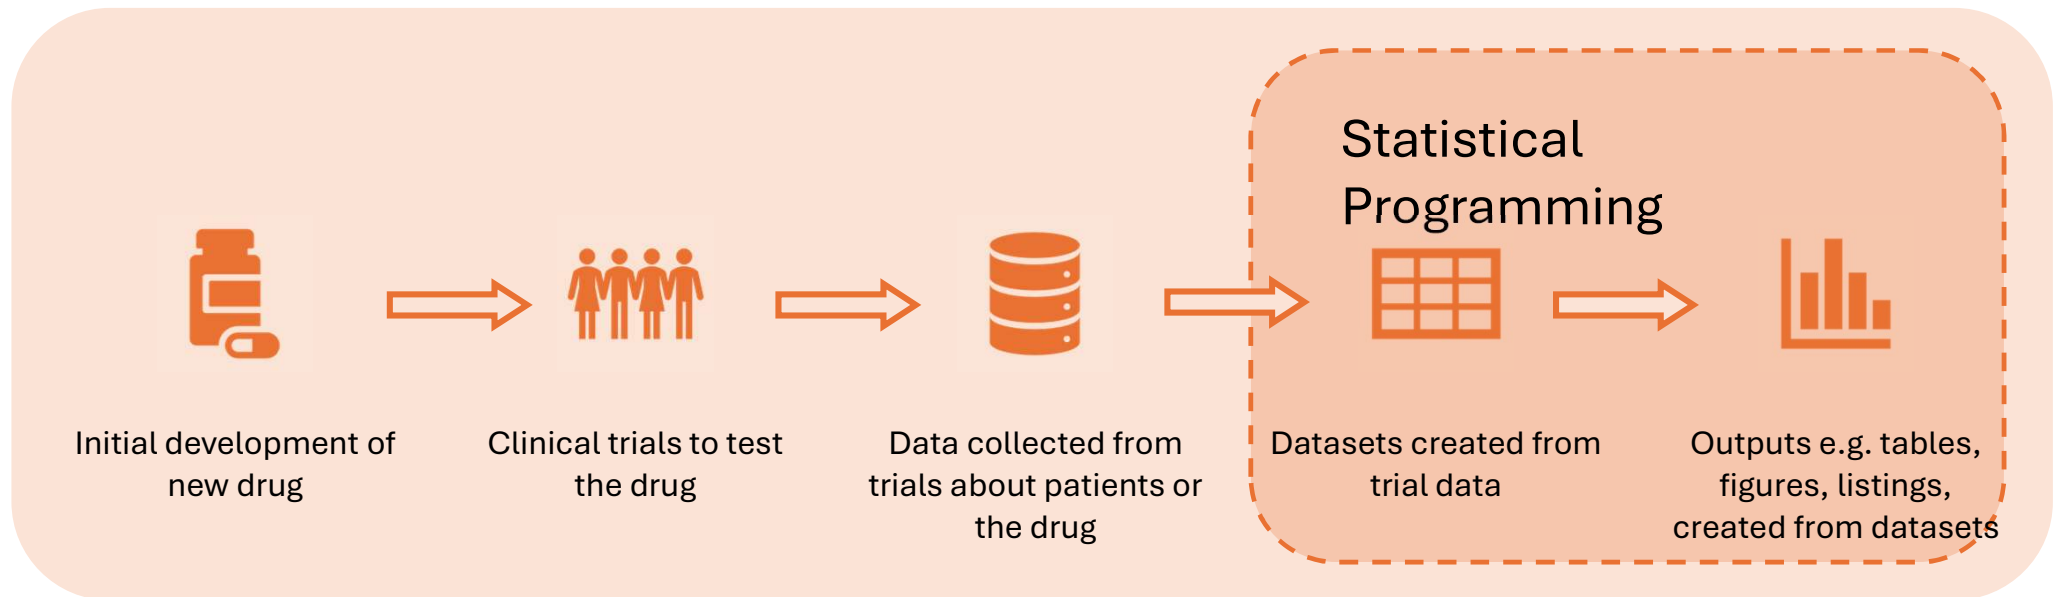

Degree:

Mathematics with Computer Science BSc,
University of Southampton

Career

What do I do?

ABOUT ME

Katie Gwinnett

A LEVELS

- Math's
- Further Math's
- Chemistry
- Economics

PLACEMENT YEAR

- **Statistics and Data Science**
Placement Student at Bayer

Pharmaceuticals

ASPIRATIONS

- Dancer / Dance Teacher
- Chef
- Actuary

UNIVERSITY STUDIES

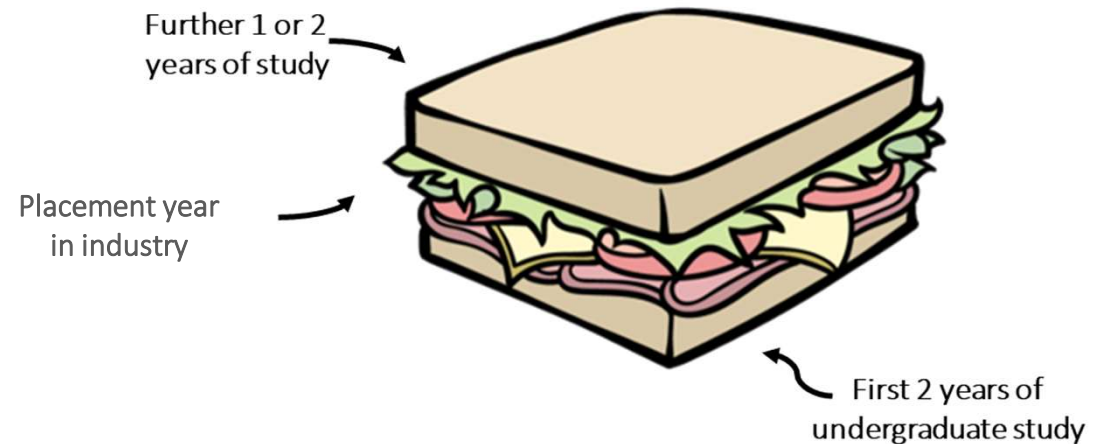

BSc Mathematics at the University of Bath

YEAR IN INDUSTRY (SANDWICH COURSE)

- **A Year In Industry** is a work experience program offered by universities to students which involves taking a year off from academic studies in a professional setting and gain practical experience in a chosen field. This year is typically taken between your second and third year of studies.

Benefits of a Placement Year:

- Opportunity to earn a salary
- Enhances your career prospects
- Expand your network
- “Test drive” a job/industry

STATISTICS AND DATA SCIENCE PLACEMENT

A LEVELS

- Math's
- Further Math's
- Chemistry
- Economics

PLACEMENT YEAR
